The Child Learning and Development (CLAD) Lab is part of the Department of Psychology at Amherst College. We study how children from birth to age 7 come to understand the world around them.

Our research questions include:

- How do children learn from the people around them?
- What role do gestures play in children's learning?
- How does learning to communicate change the way that children think about the people around them?

We rely on volunteers from the community to conduct our research, and we need your help! By volunteering to participate in one of our 30-minute studies, you and your family will contribute significantly to our knowledge of child development.

We are located conveniently on the campus of Amherst College and have reserved parking just for you and your family. Our research is designed to be fun and engaging for your child, while also allowing you to learn more about your child's development.

Please feel free to contact us for additional information. We look forward to hearing from you!
